

Erratum Notice

Date: 6th December 2024

Title: A Study Book for the NEBOSH Health and Safety Management for Construction (6th Edition)

Publisher: RMS Publishing

ISBN: 978-1-913439-23-1

It has come to our attention that an error appears on the inner pages of this publication (pages i and v). The NEBOSH Health and Safety Management for Construction (UK and International) does not meet the requirements for Technical membership of IOSH.

The qualification does meet the criteria required to apply for associate Membership (AIIRSM) of the International Institute of Risk and Safety Management. Holders of the NEBOSH Health & Safety Management for Construction (UK) qualification are also eligible to apply for the Construction Skills Certification Scheme (CSCS) Academically Qualified Person (AQP) card.

This will be corrected for future printings.

Please visit <https://iosh.com/get-involved/membership/membership-journey> for the most up to day information regarding IOSH Membership requirements.

We apologise for any inconvenience caused and appreciate your understanding.

We are happy to supply replacement pdfs where required, please contact us at support@rmspublishing.co.uk for further assistance or clarification.

NEBOSH Health and Safety Management for Construction (UK)

PREFACE

Publication users

This Essential Health and Safety Guide to the NEBOSH Health and Safety Management for Construction qualification provides an excellent reference for those who have responsibility for or involvement in construction activities. The guide provides an understanding of the health and safety risks affecting this important sector of work and assists those responsible to manage them effectively.

The practical and informative approach of the publication will provide managers, health and safety practitioners and others who work in the construction industry with a perspective of the significance of health and safety risk in construction activities and an understanding of the control measures that can be applied to manage risk. This publication would be particularly useful for clients, designers, principal contractors, principal designers, contractors and site managers. Those working in facilities and event management industries will also find the guide useful, as many of the risks they encounter are similar.

Professional recognition and SQA accreditation

Successful completion of the NEBOSH CN qualification will enable applicants to apply for first level membership of many national professional bodies related to health and safety, for example, Affiliate Membership of the Institution of Occupational Safety and Health (IOSH).

Holders of the NEBOSH Health and Safety Management for Construction (UK) are entitled to associate Membership (AIIRSM) of the International Institute of Risk and Safety Management (IIRSM).

They are also eligible to apply for the Construction Skills Certification Scheme (CSCS) Academically Qualified Person (AQP) card.

NEBOSH Health and Safety Management for Construction (UK) has been accredited and credit rated by the Scottish Qualifications Authority (SQA) Accreditation at SCQF Level 7 with 12 SCQF credit points. SCQF Level 7 is comparable to RQF/CQFW Level 4 in England, Wales and Northern Ireland.

Scope and contents

Scope

Topics covered by the guide include:

- Construction law and management.
- Improving health and safety culture and assessing risk.
- Managing change and procedures.
- Identification of workplace hazards and methods of risk control.

Reference is made to the harm that construction hazards may have and the prevalence of injuries they cause in the construction industry. The publication contains an emphasis on practical solutions to construction workplace health and safety issues.

Full colour photographs, tables and sample documents are provided to enable an understanding of how these risks can be managed.

Photographs and schematics

We have taken particular care to support the text with a significant number of full colour photographs and schematics. They are illustrative of both good and bad working practices and should always be considered in context with supporting text. Readers will find this a useful aid when trying to relate their background and experience to the broad-based construction activities that may be encountered.

Where photographs, diagrams and text extracts are known to be drawn from other publications, a clear source reference is shown and RMS wish to emphasise that reproduction of such items within the Essential Health and Safety Guide is for educational purposes only and the original copyright has not been infringed.
